

Funnel Dashboard Insights

1. Critical Funnel Leakage at Checkout

Problem:

- Only 20.87% overall conversion
- Checkout → Purchase = ~37.5% conversion
- Largest drop occurs at final stage
- Users show intent but fail to complete purchase

Why this matters:

- This is the highest revenue-impacting bottleneck
- Fixing this alone can significantly increase revenue

Solution:

- Simplify checkout flow (fewer steps)
- Enable guest checkout
- Add trust signals (secure payment, reviews)
- Reduce friction (auto-fill, fewer fields)

Growth Opportunity:

- Even a 10–15% improvement here = major revenue uplift
-

2. Extremely Low Customer Retention

Problem:

- Returning Users: 0.38% (critically low)
- Almost all users are one-time visitors

Why this matters:

- High acquisition cost
- No long-term customer value (LTV)
- Weak brand loyalty

Solution:

- Retargeting campaigns (ads + email)
- Loyalty programs / discounts
- Personalized recommendations
- Push/email re-engagement

Funnel Dashboard Insights

Growth Opportunity:

- Increasing retention even to 5–10% = exponential revenue growth
-

3. Mobile Experience is Underperforming

Problem:

- Mobile has highest drop-off (~80%)
- Traffic share is high (~33%)
- Users come on mobile but fail to convert

Why this matters:

- Mobile is usually the largest traffic source
- Poor UX = lost conversions at scale

Solution:

- Improve mobile UI/UX (clean layout, faster load)
- Optimize checkout for mobile
- Reduce page load time

Growth Opportunity:

- Mobile optimization = quick win for conversion boost
-

4. No Strong Channel Differentiation

Problem:

- Revenue from all channels is almost equal (~0.57–0.59M)
- No channel clearly outperforming

Why this matters:

- Marketing efforts may be unoptimized
- Budget not focused on high ROI channels

Solution:

- Analyze CAC (Customer Acquisition Cost) per channel
- Double down on high-intent channels (Google Ads)
- Improve targeting for Email & Social

Growth Opportunity:

- Optimizing channel spend = better ROI without increasing budget

Funnel Dashboard Insights

5. Weak User Engagement

Problem:

- Avg Views: 2.26 (low)
- Bounce Rate: 29.38%
- Users are not exploring deeply

Why this matters:

- Low engagement → low conversion probability
- Weak product discovery

Solution:

- Improve product recommendations
- Better landing pages
- Clear CTAs (Call-to-Actions)
- Personalization

Growth Opportunity:

- Increasing engagement → higher cart additions & conversions
-

6. Balanced Traffic but Uneven Performance

Problem:

- Devices and regions are evenly distributed
- But performance (drop-offs, bounce) varies
- Not all segments perform equally

Solution:

- Segment analysis (device + region + channel)
- Target weak-performing segments
- A/B testing by segment

Growth Opportunity:

- Segment-level optimization = hidden gains without more traffic
-

Final Executive Summary

Key Problems:

Funnel Dashboard Insights

- Checkout drop-off (biggest revenue leak)
- Extremely low retention
- Mobile underperformance
- Weak engagement

Key Solutions:

- Optimize checkout flow
- Improve mobile UX
- Build retention strategies
- Refine marketing targeting

Biggest Growth Levers:

1. Fix checkout → immediate revenue gain
2. Increase retention → long-term growth
3. Optimize mobile → scale conversions
4. Improve engagement → better funnel movement
